HPE MSR900 Series

Key features

- Converged routing, switching, security, and WLAN

- Integrated 2 Fast Ethernet WAN, 4/8 LAN on board

- Unified IEEE 802.11b/g wireless LAN and 3G wireless WAN

- Embedded encryption, firewall, and security features

- A unified management platform

Product overview

The HPE MSR900 router series is a component of the Hewlett Packard Enterprise (HPE) FlexBranch module of the HPE FlexNetwork architecture. MSR900 series routers deliver integrated routing, switching, security, and IEEE 802.11b/g wireless LAN in a single box for secure, reliable small branch connectivity. These routers are perfect "branch-in-a-box" appliances that deliver converged network solutions, including data, voice and video, IPv6 support, and robust Quality of Service (QoS), and help ensure that they can handle both current enterprise networking applications as well as the future connectivity and capacity demands of an HPE FlexNetwork architecture. Additionally, their standards-based design provides complete interoperability in multivendor environments.

Features and benefits

Quality of Service (QoS)

- Traffic policing lightem

  supports Committed Access Rate (CAR) and line rate

- Congestion management

  supports FIFO, PQ, CQ, WFQ, CBQ, and RTPQ

- Weighted random early detection (WRED)/random early detection (RED)

  delivers congestion avoidance capabilities through the use of queue management algorithms

- Other QoS technologies

  support traffic shaping, FR QoS, and MP QoS/LFI

Management

- Industry-standard CLI with a hierarchical structure

  reduces training time and expenses, and increases productivity in multivendor installations

- Management security

  restricts access to critical configuration commands; offers multiple privilege levels with password protection; ACLs provide telnet and SNMP access; local and remote syslog capabilities allow logging of all access

- SNMPv1, v2, and v3

  provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption

- Remote monitoring (RMON)

  uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a private alarm extension group

- FTP, TFTP, and SFTP support

  offers different mechanisms for configuration updates; FTP allows bidirectional transfers over a TCP/IP network; trivial FTP (TFTP) is a simpler method using User Datagram Protocol (UDP); Secure File Transfer Protocol (SFTP) runs over an SSH tunnel to provide additional security

- Debug and sampler utility

  supports ping and traceroute for both IPv4 and IPv6

- Network Time Protocol (NTP)

  synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock-dependent devices within the network so that the devices can provide diverse applications based on the consistent time

- Information center

  provides a central information center for system and network information; aggregates all logs, traps, and debugging information generated by the system and maintains them in order of severity; outputs the network information to multiple channels based on user-defined rules

- Network Quality Analyzer (NQA)

  analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays; allows network manager to determine overall network performance and diagnose and locate network congestion points or failures

Connectivity
- Packet storm protection

  protects against broadcast, multicast, or unicast storms with user-defined thresholds

- Loopback

  supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

- 3G access support

  provides support for popular USB 3G modems; for a list of specific modems, please refer to your local product manager

Performance
- Excellent forwarding performance

  provides forwarding performance up to 100 Kpps; meets current and future bandwidth-intensive application demands for enterprise businesses

- Embedded encryption

  supports up to 100 VPN tunnels and 8 Mbps encryption throughput

Resiliency and high availability
- Backup Center

  acts as a part of the management and backup function to provide backup for device interfaces; delivers reliability by switching traffic over to a backup interface when the primary one fails

- Virtual Router Redundancy Protocol (VRRP)

  allows groups of two routers to dynamically back each other up to create highly available routed environments; supports VRRP load balancing

Layer 2 switching
- Spanning Tree Protocol (STP)

  supports standard IEEE 802.1D STP, IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) for faster convergence, and IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)

- Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) protocol snooping

  controls and manages the flooding of multicast packets in a Layer 2 network

- Port mirroring

  duplicates port traffic (ingress and egress) to a local or remote monitoring port

- Port isolation

  increases security by isolating ports within a VLAN while still allowing them to communicate with other VLANs

- VLANs

  support IEEE 802.1Q-based VLANs

- sFlow

  allows traffic sampling

Layer 3 services
- Address Resolution Protocol (ARP)

  determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network

• Dynamic Host Configuration Protocol (DHCP)

simplifies the management of large IP networks and supports client and server; DHCP Relay enables DHCP operation across subnets

Layer 3 routing
• Static IPv4 routing

provides simple, manually configured IPv4 routing

• Routing Information Protocol (RIP)

uses a distance vector algorithm with UDP packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection

• Open shortest path first (OSPF)

delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery

• Border Gateway Protocol 4 (BGP-4)

delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates, and supports extensive policies for increased flexibility, as well as scales to very large networks

• Intermediate system to intermediate system (IS-IS)

uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)

• Static IPv6 routing

provides simple, manually configured IPv6 routing

• Dual IP stack

maintains separate stacks for IPv4 and IPv6 to ease the transition from an IPv4-only network to an IPv6-only network design

• Routing Information Protocol next generation (RIPng)

extends RIPv2 to support IPv6 addressing

• OSPFv3

provides OSPF support for IPv6

• BGP+

extends BGP-4 to support Multiprotocol BGP (MBGP), including support for IPv6 addressing

• IS-IS for IPv6

extends IS-IS to support IPv6 addressing

• IPv6 tunneling

is an important element for the transition from IPv4 to IPv6; allows IPv6 packets to traverse IPv4-only networks by encapsulating the IPv6 packet into a standard IPv4 packet; supports manually configured, 6to4, and Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) tunnels

• Policy routing

allows custom filters for increased performance and security; supports ACLs, IP prefix, AS paths, community lists, and aggregate policies

Security
- Access control list (ACL)

  supports powerful ACLs for both IPv4 and IPv6; ACLs are used for filtering traffic to prevent unauthorized users from accessing the network, or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times

- Terminal Access Controller Access-Control System (TACACS+)

  delivers an authentication tool using TCP with encryption of the full authentication request, providing additional security

- Network login

  standard IEEE 802.1x allows authentication of multiple users per port

- RADIUS

  eases security access administration by using a password authentication server

- Network address translation (NAT)

  supports one-to-one NAT, many-to-many NAT, and NAT control, enabling NAT-PT to support multiple connections; supports blacklist in NAT/NAT-PT, a limit on the number of connections, session logs, and multi-instances

- Secure Shell (SSHv2)

  uses external servers to securely login into a remote device or securely login into MSR from a remote location; with authentication and encryption, it protects against IP spoofing and plain text password interception; increases the security of SFTP transfers

- Unicast Reverse Path Forwarding (URPF)

  allows normal packets to be forwarded correctly, but discards the attaching packet due to lack of reverse path route or incorrect inbound interface; prevents source spoofing and distributed attacks

- IPSec VPN

  supports DES, 3DES, and AES 128/192/256 encryption, and MD5 and SHA-1 authentication

- Dynamic Virtual Private Network (DVPN)

  collects, maintains, and distributes dynamic public addresses through the VPN Address Management (VAM) protocol, making VPN establishment available between enterprise branches that use dynamic addresses to access the public network; compared to traditional VPN technologies, DVPN technology is more flexible and has richer features, such as NAT traversal of DVPN packets, AAA identity authentication, IPSec protection of data packets, and multiple VPN domains

Convergence
- Internet Group Management Protocol (IGMP)

  utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3

- Protocol Independent Multicast (PIM)

  defines modes of Internet IPv4 and IPv6 multicasting to allow one-to-many and many-to-many transmission of information; supports PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM)

- Multicast Source Discovery Protocol (MSDP)

  allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications

- Multicast Border Gateway Protocol (MBGP)

  allows multicast traffic to be forwarded across BGP networks and kept separate from unicast traffic

Integration

- Embedded NetStream

  improves traffic distribution using powerful scheduling algorithms, including Layer 4 to 7 services; monitors the health status of servers and firewalls

- Embedded VPN firewall

  provides enhanced stateful packet inspection and filtering; provides advanced VPN services with Triple DES (3DES) and Advanced Encryption Standard (AES) encryption at high performance and low latency, Web content filtering, and application prioritization and enhancement

Additional information

- Green initiative support

  provides support for RoHS and WEEE regulations

- OPEX savings

  realized through the use of a common operating system, which simplifies and streamlines deployment, management, and training, thereby cutting costs as well as reducing the risk of human errors associated with having to manage multiple operating systems across different platforms and network layers

- Faster time to market

  engineering efficiencies allow new and custom features to be brought rapidly to the market with better initial and ongoing stability

Warranty and support

- 1-year warranty

  See hpe.com/networking/warrantysummary for warranty and support information included with your product purchase.

- Software releases

  to find software for your product, refer to hpe.com/networking/support; for details on the software releases available with your product purchase, refer to hpe.com/networking/warrantysummary

Wi-Fi CERTIFIED

HPE access points and access devices are Wi-Fi Certified, providing our customers with the assurance that these products have met and passed the rigorous interoperability testing performed by the Wi-Fi Alliance Organization. See the Specifications section of this series for more information.
