

# HP FlexFabric 11900 Switch Series

## Key features

- High-performance CLOS-based switching architecture
- Large Layer 2 scaling with Transparent Interconnection of Lots of Links (TRILL) and HP Intelligent Resilient Framework (IRF)
- Feature-rich routing with IPv4/IPv6, Multiprotocol Label Switching (MPLS), and Quality of Service
- Enhanced modularity with control and data plane separation
- High performance with 1/10GbE, 40GbE, and 100GbE across 7.7 Tb/s switch fabric

## Product overview

The HP FlexFabric 11900 Switch Series is a high-performance, data center aggregation switch that provides line-rate 1/10GbE, 40GbE, and 100GbE connectivity designed for cost-effective end-of-row (EoR) and small core deployments.

With latency as low as 3  $\mu$ s, the HP FlexFabric 11900 Switch Series can scale to 384 1/10GbE, 192 1/10GBASE-T, 64 40GbE, or 16 100GbE ports. The switch delivers up to 7.7 Tb/s switching capacity and 5.8 Bp/s forwarding throughput. A broad variety of interface options is available, including 1/10GbE, 1/10GBASE-T, 40GbE, and 100GbE.

Ready for software-defined networking (SDN), the switch supports full Layer 2 and 3 features, including advanced features such as TRILL IRF, which provides the ability to build large, resilient switching fabrics. The HP FlexFabric 11900 Switch Series also supports fully redundant and hot-swappable components to complement its other enterprise-class capabilities.

## Features and benefits

### Data center-optimized

- Scalable Layer 2 fabrics
  - Builds flexible, resilient, and scalable Layer 2 fabrics with TRILL and HP IRF
- **NEW** Multitenant Device Context (MDC)
  - Virtualizes a physical switch into multiple logical devices, with each logical switch having its own processes, configuration, and administration
- Data Center Bridging (DCB) protocols
  - Supports IEEE 802.1Qaz Data Center Bridging Exchange (DCBX), Enhanced Transmission Selection (ETS), and IEEE 802.1Qbb Priority Flow Control (PFC) for converged fabrics
- Fibre Channel over Ethernet (FCoE) capabilities
  - Delivers support for FCoE, including expansion, fabric, trunk VF and N ports, and aggregation of E-port and N-port virtualization
- Edge Virtual Bridging (EVB) with Virtual Ethernet Port Aggregator (VEPA) support
  - Provides connectivity to the virtualization-ready data center environment
- Front-to-back airflow design
  - Accommodates deployment in data centers utilizing hot-cold aisles

### Performance

- High-performance fully distributed architecture
  - Delivers up to 7.7 Tb/s switching capacity and 5.76 Bp/s throughput with nonblocking wire-speed performance and latency as low as 3 microseconds
- High-density 1/10GbE along with 40GbE and 100GbE interface connectivity
  - Offers up to eight interface module slots to scale up to 384 1/10GbE, 192 1/10GBASE-T, 64 40GbE ports, or 16 100GbE ports
- Scalable system design
  - Provides investment protection to support future technologies and higher-speed connectivity, as the switch is designed for increased backplane bandwidth

### **Product architecture**

- Advanced Comware modular operating system

Brings native high stability, independent process monitoring, and restart through the modular design and multiple processes of HP Comware v7 software; supports enhanced serviceability functions

- In-Service Software Upgrade (ISSU)

Provides an upgrade of the entire chassis, or an individual task or process, with zero packet loss

- Distributed architecture with separation of data and control planes

Delivers enhanced fault tolerance and facilitates continuous operation and zero service disruption during planned or unplanned control-plane events

### **Resiliency and high availability**

- Intelligent Resilient Framework (IRF)

Creates virtual resilient switching fabrics, where two or more switches perform as a single L2 switch and L3 router; switches do not have to be co-located and can be part of a disaster-recovery system; servers or switches can be attached using standard Link Aggregation Control Protocol (LACP) for automatic load balancing and high availability; can help eliminate the need for complex protocols like Spanning Tree Protocol (STP), Equal-Cost Multipath (ECMP), or Virtual Router Redundancy Protocol (VRRP), thereby simplifying network operation

- Redundant/load-sharing fabrics, management, fan assemblies, and power supplies

Increase total performance and power availability while providing hitless, stateful failover

- Hot-swappable modules

Allows replacement of modules without any impact on other modules

- Graceful restart

Allows routers to indicate to others their capability to maintain a routing table during a temporary shutdown, which significantly reduces convergence times upon recovery; supports Open Shortest Path First (OSPF), Border Gateway Protocol (BGP), and intermediate system to intermediate system (IS-IS)

- Virtual Router Redundancy Protocol (VRRP)

Allows groups of two routers to dynamically back each other up to create highly available routed environments

- Device Link Detection Protocol (DLDP)  
Monitors link connectivity and shuts down ports at both ends if unidirectional traffic is detected, preventing loops in STP-based networks
- Hitless patch upgrades  
Allows patches and new service features to be installed without restarting the equipment, increasing network uptime and facilitating maintenance
- IEEE 802.3ad Link Aggregation Control Protocol (LACP)  
Supports up to 1,024 trunk groups and up to 16 members per trunk; supports static or dynamic groups and a user-selectable hashing algorithm
- Passive design system  
Delivers increased system reliability as the backplane has no active components
- Ultrafast protocol convergence (subsecond) with standard-based failure detection—  
Bidirectional Forwarding Detection (BFD)  
Enables link connectivity monitoring and reduces network convergence time for Routing Information Protocol (RIP), OSPF, BGP, IS-IS, VRRP, MPLS, and IRF

### **Layer 2 switching**

- VLAN  
Supports up to 4,094 port-based or IEEE 802.1Q-based VLANs; also supports MAC-based VLANs, protocol-based VLANs, and IP subnet-based VLANs for added flexibility
- Bridge Protocol Data Unit (BPDU) tunneling  
Transmits Spanning Tree Protocol BPDUs transparently, allowing correct tree calculations across service providers, WANs, or MANs
- Port mirroring  
Duplicates port traffic (ingress and egress) to a local or remote monitoring port; supports four mirroring groups, with an unlimited number of ports per group
- Isolation at data link layer with private VLANs  
Provides, through a two-tier VLAN structure, an additional layer of protection, simplifying network configuration while saving VLAN resources
- Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD) protocol snooping  
Controls and manages the flooding of multicast packets in a Layer 2 network

- Spanning Tree Protocol (STP)  
Supports standard IEEE 802.1D STP, IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) for faster convergence, and IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)
- IEEE 802.1ad QinQ and selective QinQ  
Increase the scalability of an Ethernet network by providing a hierarchical structure; connect multiple LANs on a high-speed campus or metro network
- Per-VLAN Spanning Tree Plus (PVST+)  
Allows each VLAN to build a separate spanning tree to improve link bandwidth usage in network environments with multiple VLANs

### **Layer 3 routing**

- Open shortest path first (OSPF)  
Delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery
- Intermediate system to intermediate system (IS-IS)  
Uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)
- Border Gateway Protocol 4 (BGP-4)  
Delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates; supports extensive policies for increased flexibility; scales to very large networks
- Multiprotocol Label Switching (MPLS)  
Uses BGP to advertise routes across Label Switched Paths (LSPs), but uses simple labels to forward packets from any Layer 2 or Layer 3 protocol, which reduces complexity and increases performance; supports graceful restart for reduced failure impact; supports LSP tunneling and multilevel stacks
- Dual IP stack  
Maintains separate stacks for IPv4 and IPv6 to ease the transition from an IPv4-only network to an IPv6-only network design
- Equal-Cost Multipath (ECMP)  
Enables multiple equal-cost links in a routing environment to increase link redundancy and scale bandwidth
- Policy-based routing  
Makes routing decisions based on policies set by the network administrator
- Static IPv4 routing  
Provides simple manually configured IPv4 routing

- Routing Information Protocol (RIP)  
Uses a distance vector algorithm with User Datagram Protocol (UDP) packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection
- IP performance optimization  
Provides a set of tools to improve the performance of IPv4 networks; includes directed broadcasts, customization of TCP parameters, support of ICMP error packets, and extensive display capabilities
- Unicast Reverse Path Forwarding (uRPF)  
Limits erroneous or malicious traffic in accordance with RFC 3074
- Static IPv6 routing  
Provides simple manually configured IPv6 routing
- Routing Information Protocol next generation (RIPng)  
Extends RIPv2 to support IPv6 addressing
- OSPFv3  
Provides OSPF support for IPv6
- IS-IS for IPv6  
Extends IS-IS to support IPv6 addressing
- BGP+  
Extends BGP-4 to support Multiprotocol BGP (MBGP), including support for IPv6 addressing
- Multiprotocol Label Switching (MPLS) Layer 3 VPN  
Allows Layer 3 VPNs across a provider network; uses MP-BGP to establish private routes for increased security; supports RFC 2547bis multiple autonomous system VPNs for added flexibility
- Multiprotocol Label Switching (MPLS) Layer 2 VPN  
Establishes simple Layer 2 point-to-point VPNs across a provider network using only MPLS Label Distribution Protocol (LDP); requires no routing and therefore decreases complexity, increases performance, and allows VPNs of non-routable protocols; uses no routing information for increased security; supports Circuit Cross Connect (CCC), Static Virtual Circuits (SVCs), Martini draft, and Kompella-draft technologies
- Virtual Private LAN Service (VPLS)  
Establishes point-to-multipoint Layer 2 VPNs across a provider network
- IPv6 tunneling  
Provides an important element for the transition from IPv4 to IPv6; allows IPv6 packets to traverse IPv4-only networks by encapsulating the IPv6 packet into a standard IPv4 packet; supports manually configured, 6to4, Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) tunnels, and IPv6 on VPN to Provider Edge (6VPE) router tunnel

### **Quality of Service (QoS)**

- IEEE 802.1p prioritization
  - Delivers data to devices based on the priority and type of traffic
- Flexible classification
  - Creates traffic classes based on access control lists (ACLs), IEEE 802.1p precedence, IP, and DSCP or Type of Service (ToS) precedence; supports filter, redirect, mirror, remark, and logging
- Bandwidth shaping
  - Port-based rate limiting
    - Provides per-port ingress/egress-enforced increased bandwidth
  - Classifier-based rate limiting
    - Uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port
  - Reduced bandwidth
    - Provides per-port, per-queue egress-based reduced bandwidth
- Broad QoS feature set
  - Provides support for strict priority queuing (SP), weighted fair queuing (WFQ), weighted deficit round-robin (WDRR), SP+WDRR together, configurable buffers, explicit congestion notification (ECN), and weighted random early detection (WRED)
- Traffic policing
  - Supports Committed Access Rate (CAR) and line rate

### **Layer 3 services**

- Address Resolution Protocol (ARP)
  - Determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network
- User Datagram Protocol (UDP) helper
  - Redirects UDP broadcasts to specific IP subnets to prevent server spoofing
- Dynamic Host Configuration Protocol (DHCP)
  - Simplifies the management of large IP networks and supports client and server; DHCP Relay enables DHCP operation across subnets

## Management

- Management interface control

Enables or disables each of the following interfaces depending on security preferences: console port, Telnet port, or reset button

- Industry-standard CLI with a hierarchical structure

Reduces training time and expenses, and increases productivity in multivendor installations

- SNMPv1, v2, and v3

Provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption

- sFlow (RFC 3176)

Provides scalable ASIC-based wirespeed network monitoring and accounting with no impact on network performance; this allows network operators to gather a variety of sophisticated network statistics and information for capacity planning and real-time network monitoring purposes

- Remote monitoring (RMON)

Uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a private alarm extension group

- Debug and sampler utility

Supports ping and traceroute for both IPv4 and IPv6

- Network Time Protocol (NTP)

Synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock-dependent devices within the network so that the devices can provide diverse applications based on the consistent time

- Network Quality Analyzer (NQA)

Analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays and file transfer rates; allows a network manager to determine overall network performance and to diagnose and locate network congestion points or failures

- Information center

Provides a central repository for system and network information; aggregates all logs, traps, and debugging information generated by the system and maintains them in order of severity; outputs the network information to multiple channels based on user-defined rules

- IEEE 802.1AB Link Layer Discovery Protocol (LLDP)

Advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications

### **Connectivity**

- Jumbo frames

Allows high-performance backups and disaster-recovery systems with a maximum frame size of 9 k bytes

- Loopback

Supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

- Ethernet operations, administration, and maintenance (OAM)

Detects data link layer problems that occurred in the “last mile” using the IEEE 802.3ah OAM standard; monitors the status of the link between two devices

- Monitor link

Collects statistics on performance and errors on physical links, increasing system availability

- Packet storm protection

Protects against unknown broadcast, unknown multicast or unicast storms with user-defined thresholds

- Flow control

Provides back pressure using standard IEEE 802.3x, reducing congestion in heavy traffic situations

### **Security**

- Access control list (ACL)

Supports powerful ACLs for both IPv4 and IPv6; ACLs are used for filtering traffic to prevent unauthorized users from accessing the network or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times

- Remote Authentication Dial-In User Service (RADIUS)

Eases switch security access administration by using a password authentication server

- Terminal Access Controller Access-Control System (TACACS+)

Delivers an authentication tool using TCP with encryption of the full authentication request, providing additional security

- Secure Shell v2 (SSHv2)

Uses external servers to help securely log in to a remote device; with authentication and encryption, it protects against IP spoofing and plain-text password interception; increases the security of Secure FTP (SFTP) transfers

- DHCP snooping  
Helps ensure that DHCP clients receive IP addresses from authorized DHCP servers and maintain a list of DHCP entries for trusted ports; prevents reception of fake IP addresses and reduces ARP attacks, improving security
- IP Source Guard  
Filters packets on a per-port basis, which prevents illegal packets from being forwarded
- ARP attack protection  
Protects against attacks that use a large number of ARP requests, using a host-specific, user-selectable threshold
- Port security  
Allows access only to specified MAC addresses, which can be learned or specified by the administrator
- IEEE 802.1X support  
Provides port-based user authentication with support for Extensible Authentication Protocol (EAP) MD5, TLS, TTLS, and PEAP with choice of AES, TKIP, and static or dynamic WEP encryption for protecting wireless traffic between authenticated clients and the access point
- Multiple user authentication methods
  - IEEE 802.1X  
Uses an IEEE 802.1X supplicant on the client in conjunction with a RADIUS server to authenticate in accordance with industry standards
  - Web-based authentication  
Provides a browser-based environment, similar to IEEE 802.1X, to authenticate clients that do not support the IEEE 802.1X supplicant
  - MAC-based authentication  
Authenticates the client with the RADIUS server based on the client's MAC address

### **Multicast support**

- Internet Group Management Protocol (IGMP)

Utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3

- Protocol Independent Multicast (PIM)

Defines modes of Internet IPv4 and IPv6 multicasting to allow one-to-many and many-to-many transmission of information; PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM) are supported

- Multicast Source Discovery Protocol (MSDP)

Allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications

- Multicast Border Gateway Protocol (MBGP)

Allows multicast traffic to be forwarded across BGP networks separately from unicast traffic

### **Integration**

- **NEW** VPN 20Gbps 11900 Firewall Module

Provides enhanced stateful packet inspection and filtering; supports flexible security zones and virtual firewall containment; delivers advanced VPN services with 3DES and AES encryption at high performance and low latency; offers web content filtering, application prioritization and optimization

### **Warranty and support**

- One-year warranty

Advance hardware replacement with 10-calendar-day delivery (available in most countries)

- Electronic and telephone support

Limited electronic and business-hours telephone support is available from HP for the entire warranty period; to reach our support centers, refer to [hp.com/networking/contact-support](http://hp.com/networking/contact-support); for details on the duration of support provided with your product purchase, refer to [hp.com/networking/warrantysummary](http://hp.com/networking/warrantysummary)

- Software releases

To find software for your product, refer to [hp.com/networking/contact-support](http://hp.com/networking/contact-support); for details on the software releases available with your product purchase, refer to [hp.com/networking/warrantysummary](http://hp.com/networking/warrantysummary)

## HP FlexFabric 11900 Switch Series

### Specifications

---

#### HP FlexFabric 11900-V Switch Chassis (JG608A)

---

<b>I/O ports and slots</b>	8 I/O module slots Supports a maximum of 384 1/10GbE ports or 192 1/10GBASE-T ports or 64 40GbE ports or 16 100GbE ports, or a combination
<b>Additional ports and slots</b>	2 MPU (for management modules) slots 4 switch fabric slots
<b>Power supplies</b>	6 power supply slots 1 minimum power supply required (ordered separately)
<b>Fan tray</b>	includes: 1 x JC634A 1 fan tray slot
<b>Physical characteristics</b>	
Dimensions	17.32(w) x 25.98(d) x 34.88(h) in (43.99 x 65.99 x 88.6 cm) (20U height)
Weight	169.53 lb (76.9 kg) chassis
Full configuration weight	331.31 lb (150.28 kg)
<b>Memory and processor</b>	
Management module	Dual Core MIPS64 @ 1.2 GHz, 512 MB flash, 8 GB DDR2 SDRAM
<b>Mounting and enclosure</b>	Mounts in an EIA-standard 19-inch rack or other equipment cabinet (hardware included); horizontal surface mounting only

---

---

**HP FlexFabric 11908-V Switch Chassis (JG608A)**

---

**Performance**

Throughput	up to 5.8 Bpps (64-byte packets)
Switching capacity	7.7 Tb/s
Routing table size	16384 entries (IPv4), 8192 entries (IPv6)
MAC address table size	131072 entries

---

**Reliability**

Availability	99.999%
--------------	---------

---

**Environment**

Operating temperature	32°F to 113°F (0°C to 45°C)
Operating relative humidity	10% to 95%, noncondensing
Nonoperating/Storage temperature	-40°F to 158°F (-40°C to 70°C)
Nonoperating/Storage relative humidity	5% to 95%, noncondensing
Altitude	up to 13,123 ft (4 km)
Acoustic	Low-speed fan: 61.6 dB, High-speed fan: 72.6 dB

---

**Electrical characteristics**

AC voltage	100 - 120 / 200 - 240 VAC
DC voltage	-48 to -60 VDC
Current	16/60 A
Power output	2500 W
Frequency	50/60 Hz

---

**Notes**

Based on a common power supply of 2,500 W (AC)

---

**Safety**

CAN/CSA 22.2 No. 60950-1; FCC Part 15, Subpart B; FDA 21 CFR Subchapter J; ROHS Compliance;  
IEC 60950-1 :Second Edition ; EN 60950-1:2006 + A11:2009; AS/NZS 60950-1; IEC 60825-1;  
UL 60950-1, 2nd Edition; EN60825-2:2004+A1:2007

---

**Emissions**

VCCI Class A; EN 55022 Class A; CISPR 22 Class A; IEC/EN 61000-3-2; IEC/EN 61000-3-3; ICES-003 Class A;  
AS/NZS CISPR 22 Class A; FCC (CFR 47, Part 15) Class A; GB9254

<b>QoS/CoS</b>	IEEE 802.1P (CoS) RFC 1349 Type of Service in the Internet Protocol Suite	RFC 2211 Specification of the Controlled-Load Network Element Service RFC 2212 Guaranteed Quality of Service	RFC 2474 DSCP DiffServ RFC 2475 DiffServ Architecture RFC 2597 DiffServ Assured Forwarding (AF) RFC 2598 DiffServ Expedited Forwarding (EF)
<b>Security</b>	IEEE 802.1X Port Based Network Access Control RFC 1321 The MD5 Message-Digest Algorithm RFC 1334 PPP Authentication Protocols (PAP) RFC 1492 TACACS+ RFC 1994 PPP Challenge Handshake Authentication Protocol (CHAP) RFC 2082 RIP-2 MD5 Authentication	RFC 2104 Keyed-Hashing for Message Authentication RFC 2408 Internet Security Association and Key Management Protocol (ISAKMP) RFC 2409 The Internet Key Exchange (IKE) RFC 2716 PPP EAP TLS Authentication Protocol RFC 2865 RADIUS Authentication RFC 2866 RADIUS Accounting	RFC 2868 RADIUS Attributes for Tunnel Protocol Support RFC 2869 RADIUS Extensions Access Control Lists (ACLs) Guest VLAN for 802.1x MAC Authentication Port Security SSHv1/SSHv2 Secure Shell
<b>VPN</b>	RFC 2403 - HMAC-MD5-96 RFC 2404 - HMAC-SHA1-96 RFC 2405 - DES-CBC Cipher algorithm	RFC 2407 - Domain of interpretation RFC 2547 BGP/MPLS VPNs RFC 2917 A Core MPLS IP VPN Architecture	RFC 4302 - IP Authentication Header (AH) RFC 4303 - IP Encapsulating Security Payload (ESP)

## HP FlexFabric 11900 Switch Series accessories

### Modules

HP FlexFabric 11900 48-port 10GbE SFP+ SF Module (JG612A)  
 HP FlexFabric 11900 32-port 10GbE SFP+ SF Module (JG611A)  
 HP FlexFabric 11900 Main Processing Unit (JG609A)  
 HP FlexFabric 11900 24-port 1/10GBASE-T SF Module (JG615A)  
 HP FlexFabric 11900 8-port 40GbE QSFP+ SF Module (JG614A)  
 HP FlexFabric 11900 4-port 40GbE QSFP+ SF Module (JG613A)  
**NEW** HP FlexFabric 11900 2-port 100GbE CFP SE Module (JG918A)

### Transceivers

HP X120 1G SFP RJ45 T Transceiver (JD089B)  
 HP X120 1G SFP LC SX Transceiver (JD118B)  
 HP X120 1G SFP LC LX Transceiver (JD119B)  
 HP X125 1G SFP LC LH40 1310nm Transceiver (JD061A)  
 HP X120 1G SFP LC LH40 1550nm Transceiver (JD062A)  
 HP X125 1G SFP LC LH70 Transceiver (JD063B)  
 HP X120 1G SFP LC LH100 Transceiver (JD103A)  
 HP X120 1G SFP LC BX 10-D Transceiver (JD099B)  
 HP X120 1G SFP LC BX 10-U Transceiver (JD098B)  
 HP X170 1G SFP LC LH70 1470 Transceiver (JD113A)  
 HP X170 1G SFP LC LH70 1490 Transceiver (JD114A)  
 HP X170 1G SFP LC LH70 1510 Transceiver (JD115A)  
 HP X170 1G SFP LC LH70 1530 Transceiver (JD116A)  
 HP X170 1G SFP LC LH70 1550 Transceiver (JD109A)  
 HP X170 1G SFP LC LH70 1570 Transceiver (JD110A)  
 HP X170 1G SFP LC LH70 1590 Transceiver (JD111A)  
 HP X170 1G SFP LC LH70 1610 Transceiver (JD112A)  
 HP X130 10G SFP+ LC SR Transceiver (JD092B)  
 HP X130 10G SFP+ LC LRM Transceiver (JD093B)  
 HP X130 10G SFP+ LC LR Transceiver (JD094B)  
 HP X130 10G SFP+ LC ER 40km Transceiver (JG234A)  
 HP X240 10G SFP+ to SFP+ 0.65m Direct Attach Copper Cable (JD095C)  
 HP X240 10G SFP+ to SFP+ 1.2m Direct Attach Copper Cable (JD096C)  
 HP X240 10G SFP+ to SFP+ 3m Direct Attach Copper Cable (JD097C)  
 HP X240 10G SFP+ to SFP+ 5m Direct Attach Copper Cable (JG081C)  
 HP X240 10G SFP+ SFP+ 7m Direct Attach Copper Cable (JC784C)  
 HP X140 40G QSFP+ LC LR4 SM 10km 1310nm Transceiver (JG661A)  
 HP X140 40G QSFP+ MPO SR4 Transceiver (JG325A)  
 HP X240 40G QSFP+ to QSFP+ 1m Direct Attach Copper Cable (JG326A)  
 HP X240 40G QSFP+ to QSFP+ 3m Direct Attach Copper Cable (JG327A)  
 HP X240 40G QSFP+ to QSFP+ 5m Direct Attach Copper Cable (JG328A)  
 HP X240 40G QSFP+ to 4x10G SFP+ 1m Direct Attach Copper Splitter Cable (JG329A)  
 HP X240 40G QSFP+ to 4x10G SFP+ 3m Direct Attach Copper Splitter Cable (JG330A)  
 HP X240 40G QSFP+ to 4x10G SFP+ 5m Direct Attach Copper Splitter Cable (JG331A)  
 HP X140 40G QSFP+ MPO SR4 Transceiver (JG325B)  
 HP X140 40G QSFP+ MPO MM 850nm CSR4 300m Transceiver (JG709A)  
**NEW** HP X150 100G CFP LC LR4 10km SM Transceiver (JG829A)

## HP FlexFabric 11900 Switch Series accessories (continued)

---

<b>Power Supply</b>	HP FlexFabric 11900 2500W AC Power Supply (JG616A) HP FlexFabric 11900 2400W DC Power Supply (JG617A)
<b>Mounting Kit</b>	HP X421 Chassis Universal 4-post Rack Mounting Kit (JC665A)
<b>Power cords</b>	HP 10500 -48V 3m DC Power Supply Cable (JG390A) HP 10500 -48V 15m DC Power Supply Cable (JG391A)
<b>Appliance</b>	HP 10500/11900/7500 20Gbps VPN Firewall Module (JG372A)
<b>HP FlexFabric 11908-V Switch Chassis (JG608A)</b>	HP FlexFabric 11908 1.92Tbps Type D Fabric Module (JG610A) HP FlexFabric 11908-V Spare Fan Assembly (JG618A)
