

Lenovo Flex System Enterprise Chassis

Flexibility, Efficiency

To meet today's complex and ever-changing business demands, the Lenovo Flex System Enterprise Chassis provides a high-performance, integrated infrastructure platform that supports a mix of compute and networking capabilities. The Flex System Enterprise Chassis has been designed and built specifically to provide the efficiency you need now, along with the growth path necessary to protect your investment into the future.

The Flex System Enterprise Chassis is the foundation of the Flex System offering, which features 14 standard (half-width) Flex System form factor compute node bays in a 10U chassis that delivers high-performance connectivity for your integrated compute, networking and management resources.

Customizable

The physical design of the Flex System Enterprise Chassis includes 14-bays that allow installation of compute or management nodes with up to four networking modules located in the rear. A single chassis or a group of chassis can be fully customized to the specific needs of the computing environment. With support for Intel processor-based nodes, you can choose the custom architecture you need for your business. This means your IT can meet business needs using a single platform across multiple processors and operating environments.

High Reliability

The power management design of the chassis monitors and controls power usage on all major chassis components. The chassis supports N+N or N+1 redundant power supplies, a single, three-phase power domain and an entirely passive mid-plane to meet your reliability needs. The 2500 W power supplies are 80 PLUS® Platinum certified to deliver high energy efficiency.

Lenovo Flex System Enterprise Chassis

The environmental design of Flex System optimizes cooling using internal chassis cooling zones. The system then manages the fans independently based on node configuration within the chassis. This allows the system to increase the speed of certain fans to cool potential hotspots while using lower speeds for other fans where appropriate. The result is component longevity and reduced cooling costs.

Easily Scalable

From inception, the Flex System Enterprise Chassis has been designed to scale with your business needs. This protects your investment by helping prevent the rip-and-replace cycle that has been commonly associated with meeting increased enterprise computing needs.

Providing additional compute or networking capacity is as simple as adding additional nodes, modules, or even additional chassis. With the modular power-supply design and two available power supply capacities, you can install the system you need now, and realize immediate cost savings while retaining the ability to easily upgrade to more power when your workload demands warrant it.

Systems Management

In addition, managing these chassis could not be easier. Whether you have one chassis or several chassis deployed to meet your organizational needs, Lenovo XClarity provides automated discovery, monitoring, firmware updates, configuration management, and bare metal deployment of operating systems and hypervisors across multiple systems.

Designed For Future

The Flex System Enterprise Chassis is an upgradeable system that allows you to customize with any mix of networking and computing power. Flex System can manage your current needs and grow as your business demands drive your IT needs.

The Flex System Enterprise Chassis is designed to be the foundation of your IT infrastructure now and into the future. Compute performance requirements are always on the rise. And networking demands continue to grow with rising bandwidth needs and shrinking latency tolerance.

The Flex System Enterprise Chassis is designed to scale to meet the needs of your future workloads. It has the ability to support your immediate compute, storage and networking needs while providing component upgrade paths for each of them. And with an upgradable power supply providing the energy, the entire system is designed to meet your immediate needs as well as allow for future growth without the rip-and-replace requirements traditionally associated with infrastructure capacity improvements.

Lenovo Flex System Enterprise Chassis

Specifications

Node Bays	14 (7 double-wide)
Height (mm) x Width (mm) x Depth (mm)	440 x 447 x 847
Ship Loadable	Yes
Available Power Supplies (2/6)	2500 W 200 - 240 V AC power supply 2500 W 380 V HVDC power supply 2500 W -48 V DC power supply

Why Lenovo

Lenovo is the leading provider of x86 systems for the data center. The portfolio includes rack, tower, blade, dense and converged systems, and supports enterprise class performance, reliability and security. Lenovo also offers a full range of networking, storage, software and solutions, and comprehensive services supporting business needs throughout the IT lifecycle.
